Love the **earth** ,plant a Roof or wall

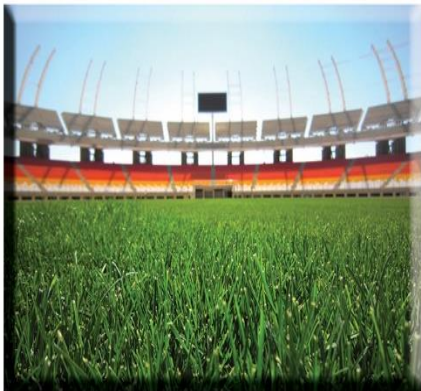

Green Space design and implementation done by our experts such as city areas , roof gardens , green wall and landscape For 25 relevant projects with 42000 square meter could have been a contribution in developing country capacities.

Some of delivered projects:

Imam reza stadium project in Mashhad

Naqshe jahan stadium project in isfahan

Sardar azadegan stadium project in Qazvin

Some of professional machineries :

Lawn mower

Lawn mower (pedestrian)

Reel lawn mower

Sprayer

Sod cutter and roller

Aerator

Manual roller (artificial turf)

Seeding machine

Debris blower

Installer machine (artificial turf)

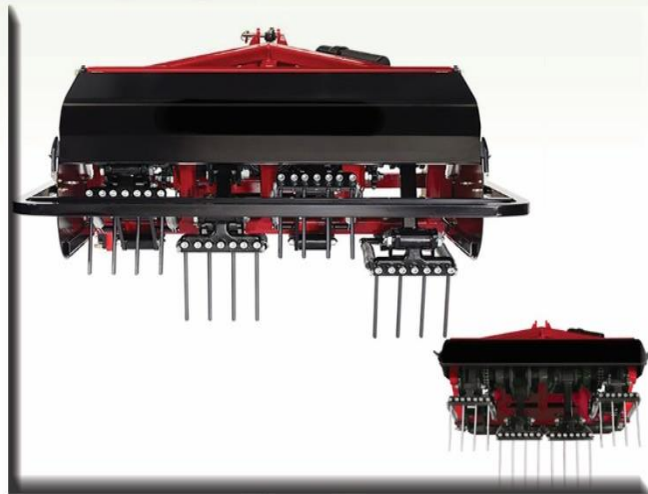

Specific machineries of cedrusesabz company :

Hybrid grass

One of the latest methods applied by some European companies supposed to use in world cup 2018 Russia, is SYS grass as a mixture of synthetic and natural grasses. The synthetic fibers in a proper ratio is planted in a space of natural grass. This method could attract many reputable football clubs such as Barcelona, Real Madrid, Chelsea and Juventus expecting to use in a large scale. It is our honor to announce that CedruseSabz Company has been pioneer to import the technology in the country.

Aerator

A lawn aerator is a garden tool or machine designed to create holes in the soil in which lawn grasses grow. In compacted lawns aeration improves soil drainage and encourages worms, micro fauna and microflora which require oxygen. Lawn aeration constitutes two things: controlling lawn thatch and reducing soil compaction. Lawn thatch is a layer of dead organic tissue that can protect the lawn by moderating temperature and reducing evapotranspiration when it is a reasonable thickness, but too much thatch can limit soil oxygenation and reduce watering effectiveness. Soil compaction makes it difficult for grass to develop long roots and disturbs both natural rainwater and artificial irrigation.
